

To Whom It May Concern:

I feel very strongly that creating a 'fast-lane' to internet access will negatively impact the consumer. Not only will it create an environment where very few control bandwidth and where it is allocated, but it will also result in higher costs to end users and impede internet based small business development and entrepreneurial start-ups.

Please do not allow the limited number of media/cable/broadband companies to control the internet access of the many. I firmly believe that the internet should be classified as a public utility, similar to that of electricity - allowing for fair and equal access for all.
