"Net Neutrality is important.

The ISPs already have a fast lane. It's called tiered service levels. If they would like more money, tell the ISPs to install Fiber and charge more for it.

Don't reward cable companies by allowing them to make more money off the same out-of-date pipes they already use. Without Net Neutrality, the Net will be slow for consumers and the cable companies make more money on inferior service.

As a consumer, I pay for 30mbps down and 2mbps up. When the Internet is slow, I contact my ISP and expect them to fix it.. Not wait for Google/YouTube to pay my ISP and back-bone providers money.

Net Neutrality is important. Its freedom of speech. It allows consumers to make a choice of content providers. Net Neutrality is essential to ensuring good business practices and only ISPs benefit from this proposed change." Adam Outler

Sincerely,  
An infuriated and concerned citizen
