Protect customers please. There is no competition for Broadband internet in my area. ISP's that provide 3 megabyte per second internet connections cannot be seriously taken as broadband competitors. While there is some competition in Satellite television and phone providers no one can compete realistically at the ISP level with Comcast or Time Warner where they are already established. They're cited competition in there application sent to you is asinine, Facebook etc. are content providers not service providers. You need Comcast/Time Warner to access most of their cited "competition" so using them in defense of their merger is false and ridiculous. I would like to formally request you DENY this merger in the name of fair competition.
