The FCC should not sanction or allow any type of paid internet traffic prioritization, sponsored data agreements, or other arrangements that create so-called "fast lanes and slow lanes" on the internet.

As integral as unfettered internet access is to both individual citizens and businesses of all types and sizes, broadband internet access should be reclassified as a utility and regulated in a way that ensures that there is not a dividing of the internet in to full access for the privileged few and limited access for the rest.

I agree with FCC Chairman Tom Wheeler when he says, "Privileging some content to the disadvantage of others is unacceptable." and ". . . when a consumer buys a specified bandwidth, it is commercially unreasonable . . . to deny them the full connectivity and the full benefits that connection enables."
