I would like to register my comment that I am absolutely opposed to an approval of a buyout of Time Warner Cable, the #2 Cable/Internet Service provider, by the #1 Cable/Internet Service Provider, Comcast.

This can only lead to WORSENING conditions for consumers that subscribe to their cable and Internet services. They will quickly introduce data caps in the name of a "bandwidth shortage", sticking "overage fees" to customers, just like cell phone service providers. They will also quickly introduce tiered services, as well as throttling competitor's connections, all while maintaining their poor customer service and high prices.
