

7521143087.txt

The internet is relatively young and yet it has become the defining mechanism of our generation. There is a reason why FCC's new proposal to create 'fast lanes' has caused an uproar and to ignore it would be not only be reckless but detrimental to our society.

To stifle innovation by disrupting the playing field will hurt the future of this country. How can young ideas compete in an unfair system? What hope is there for innovation and experimentation?

The United States is a country famous for incubating bold new vision and nurturing the entrepreneurial spirit. It's in the very DNA of this nation, so let's not jeopardize that principle. Please classify the internet providers as Title II common carriers and keep the internet free.
