Please do not approve the proposal that would allow the internet to be tiered for a fee. I want to have equal access to any site of my choosing and not suffer the risk of an ISP limiting or accelerating access to content on the web. The speed at which any type or source of content is provided is should not be the controlled by an ISP through fees. Please classify ISP`s as common carriers so that they serve all content providers and those accessing this content equally. Thank you. Lawrence Kelly
