I appreciate the effort the FCC is taking to insure that all are served by broadband. I live in a rural area of North Carolina and have been paying into the Universal Service Fund which funds Connect America while the only choices for internet connections at our home are grossly inadequate(dial-up, 3G, or satellite). We do not even have access to DSL over copper. So, when a provider offers to bring fiber broadband service to us with funding from Connect America, I am elated! Please allow Randolph Telephone Cooperative to lay a fiber line to my home, and the homes of my unserved neighbors. They are a local rural cooperative and have proven already in the areas they currently serve that they can service rural areas. This investment of our Connect America funds will have the greatest impact on our future.
