Our country is already becoming a joke to the rest of the world when it comes to Internet speeds and the cost associated with it. Without Net Neutrality, this will become much worse. With next to no competition with ISPs, I imagine we would see costs raise up the same way it did with cable. Cable prices went up four times the rate of inflation. Giving companies the right to throttle and dictate what goes where means that the same thing will happen here, and smaller startups will have zero chance of being successful with any web based business. Why would I go to Joe-Schmo's website that loads slower than Amazon, who would be paying the ISPs for faster lanes? Why do the ISPs care where the traffic goes? I don't get charged any more by the city for using roads no matter which way I take, and instead get charged a flat fee. It's ridiculous how badly this would cater to the already big businesses who provide an already expensive service with notorious poor support.
