I would like to ask that the FCC NOT adopt these "net neutrality" rules on the grounds that this will cause the cost for internet service to increase while at the same time causing service to be slowed down/disrupted for some but not for the chosen few. It would seem that adopting these rules will provide major companies with an advantage at the cost of smaller companies, and at the cost of the regular consumer. I do not want to have to purchase services or "lanes" that I do not want, at a greater expense than what I already pay. I already do that for cable television and it's outrageous, and outrageously expensive. I do not want a few huge monopolies to be allowed to enter into separate contracts and to charge higher fees at the expense of others. These rules are unfair, discriminatory, and will cause rates to skyrocket. I ask you to NOT adopt these new rules. Thank you for your time.
