I can not believe that in the USA we pay more for our internet access than almost every other country and yet our access speed is lower than estonia. To top that off now we are going to let these companies charge us and the sites we want to use even more money to increase profits. When will all this stop or will this finally be the straw that broke the camels back. The moment when the American people become fed up with the rampant inequality and injustices committed by the agencies set up to protect the people not corporate welfare. Your move fcc, YOUR MOVE.
