A free and open internet is a vital public service. Net Neutrality MUST be maintained! The majority of this nation's ISPs have made it clear that they value profits over the greater good of the nation.

I reject the idea of "internet fast lanes". Public policy should not be bought and sold by companies like Comcast, TWC and Verizon. They want to both control what is delivered, and still take no liability for it (DMCA)!

Any and all internet providers should be classified as common carriers. They are no different than phone providers or delivery trucks.
