It is amazing how our government will just bend over for lobbyists or anyone with money. The lower class, middle class, and upper class are irrelevant only the corporation and the ultra upper class matter. We all know exactly what this bill is ACTUALLY meant to do; make corporations more money! When a country like Estonia has faster and cheaper internet than the United States, it doesn't make us seem very "free" does it? While other countries have unrestricted and free access to internet our country is trying to figure out ways it can be unrestricted\* (\*for an extra ~50\$ monthly). Who else has "restricted" internet: China, N. Korea, Egypt? Soon the US will be added to that list. What a great list of countries to have our name next to, all for the sake of the Comcast and Timewarners stock going up.
