

7521180107.txt

The concept of companies paying for their data to move faster than others creates an unneeded barrier to entry for new companies. It will hinder their ability to compete, and it will stifle innovation of new ideas being brought to the marketplace.

This is the internet, where instant gratification is the norm. If you have to wait for a video to load longer than 15 seconds, most people are off to find a new provider of the content. Without net neutrality that scenario is always going to lead those consumers to the companies that have paid for their fast lane access.

I know that you typically bend your will to whatever the cable companies want to be done, but you can't do it with this one. They've already got one monopoly on the TV market that you should have stopped, don't fail us again.
