The Chairperson of the FCC was a cable lobbyist, this means he has a massive conflict of interest going into the Comcast and Time Warner Cable merger. We pay more money for our internet in the United States than almost any other country in the world and we are given with the worst customer, unreliable connections, very small monthly data restriction, and speeds that are far slower than some of the smallest countries in the world. We live in the country that host the majority of the servers that provide content on the internet, and we do not have the highest speeds, it's ridiculous. By allowing the Merger of TWC and Comcast you will guarantee that all of these problems persist and will in fact get worse. Prices will go up and quality of service will go down under this merger. Please actually do the right thing for once in my lifetime and protect consumers.

Please do not allow the merger of Comcast and Time Warner Cable.
