Gezo: Hey Epic NASA, I got an iPhone

Gezo: thought you should know.

Epic (NASA): so know you are relevant again

Epic (NASA): god speed to you and your iPhone

Gezo: I te speed to my iPhone

Epic (NASA): word

Gezo: pretty much everything youve taught me about apple is true

Epic (NASA): ITs deeper than that

Epic (NASA): we are inside a binary code

Epic (NASA): 0 and 1

Epic (NASA): 0 is earth

Epic (NASA): clocks

Epic (NASA): cycles

Epic (NASA): rotations

Epic (NASA): all zeros

Epic (NASA): when we die

Epic (NASA): we return to the 1

Epic (NASA): all things

Epic (NASA): light

Epic (NASA): warmth

Epic (NASA): the one

Gezo: so where did steve jobs go

Epic (NASA): to the 1 to be redeposited onto the next 1

Epic (NASA): next 0

Epic (NASA): he went to the 1 to be redeposited onto the next 0

Epic (NASA): its all concted by life

Epic (NASA): its how we explore space

Epic (NASA): we are space explorers

Epic (NASA): imortal

Gezo: so we are the digits

Gezo: and the unvirse is binary

Epic (NASA): only we think we are mortal

Epic (NASA): right

Epic (NASA): we are the code

Epic (NASA): every thing we see is created by the imagination

Epic (NASA): like a simulation

Epic (NASA): to help us learn

Epic (NASA): and prepeare us for whats next

Epic (NASA): whatever that is maybe just the next planet

Epic (NASA): or maybe something bigger

Epic (NASA): like maybe we are planets

Epic (NASA): or stars

Epic (NASA): and this is a nursery

Gezo: the internet is the brain of the planet?

Epic (NASA): for the kids

Epic (NASA): its something we created because we creat in the same image that created us. The internet then would be the galaxy

Gezo: so are there beings within our creations

Epic (NASA): we created the internet out of our imagination because what ever created us creates that way

Epic (NASA): yes other worlds inhabited lots of them some far some really far none are close to us

Epic (NASA): they are to far to ever meet

Epic (NASA): but we know they are there

Epic (NASA): there are over 60 new worlds found so far all earth like

Epic (NASA): there is a data base called exoplanet database

Epic (NASA): all new discoveries get logged into that and distributed to all universites all over the world

Gezo: so theres more beings just like us in the same simulation

Epic (NASA): Yes some far more advanced than us in development

Epic (NASA): there is lots of variation to life also some are dinosaur worlds some

are human worlds some are ocean planets with life some are diamond worlds with weird energy

Epic (NASA): yes a diamond the size of the world has been discovered

Gezo: how did we discover this

Epic (NASA): All sorts of methods most lensing others are hubble, harp telescope, chandra telescope, james web telescope etc

Epic (NASA): lasers. infrared, ion beams

Epic (NASA): micro wave beams

Epic (NASA): tons of new ways to find them

Epic (NASA): and we are finding them

Gezo: so did a god program us

Epic (NASA): harp telescope alone found alot

Gezo: or greater being

Epic (NASA): we may very well be the universe awakening to a consciousness that is aware of itself on every level including microscopic

Epic (NASA): you are me i am you and we are the universe awakening into consciousness

Epic (NASA): lol my spelling

Epic (NASA): :)

Gezo: Its ok spelling isnt that important

Gezo: as long as you can communicate

Epic (NASA): its all to prepare us, for example if there was no pain we would not value joy, and if there was no cold we would not know warmth, its all here to help us understand and value

Epic (NASA): even at its most uncomfortable horrific death there is still a equal reaction of creative continuation that happens that i believe is like salmon returning to spawn and is how we explore space and have been for billion if not forever and we will continue to do so

Epic (NASA): you and i built the pyramids bro

Gezo: So eventually we spread everywhere

Gezo: is that our goal

Epic (NASA): I think we are one with everything so all life is connected constantly

Epic (NASA): everywhere

Epic (NASA): so in essence your song doesnt change just your body

Epic (NASA): sometimes your human

Epic (NASA): sometimes your energy

Epic (NASA): I think we explore this way and it may not be our first rodeo here it just seems like it, we may have travelled all the worlds so many times over our own history we will never know

Gezo: so we're energy

Epic (NASA): When we explore space yes

Epic (NASA): as the 1

Epic (NASA): when we are in the 0 we are human

Gezo: cant you just call it live and die.

Epic (NASA): not with math no

Epic (NASA): its all math

Epic (NASA): your either on 1 or off 0

Epic (NASA): on energy

Epic (NASA): in space math is constant

Epic (NASA): its written in

Epic (NASA): all habitable worlds exist within the habitable zones around m class stars all dictated by math

Epic (NASA): the habitable planets are usually 3rd or 4th (mars) positions also dictated by the same math

Epic (NASA): called a habitable zone

Epic (NASA): all math

Gezo: since thats the only perfect thing?

Epic (NASA): its a universal language

Epic (NASA): the universal language

Epic (NASA): its how we will communicate should we ever make contact via radio or something

Epic (NASA): or perhaps we already have

Epic (NASA): :)

Epic (NASA): the mind is the best way to travel

Gezo: but then how do we think
Gezo: why are we
Gezo: here
Gezo: actually doing stuff.
Epic (NASA): its to help us learn what and who we are and where we will be going
Epic (NASA): its a nursery from a parent
Epic (NASA): its a gift from something that loved us allot like a mother or
sometihng
Epic (NASA): its out of love we exist
Epic (NASA): like a mom
Epic (NASA): it loves us
Epic (NASA): it wants us to explore
Gezo: So theres a cosmic mother entity
Epic (NASA): it wants to enjo
Gezo: in charge of this
Epic (NASA): its a observer
Epic (NASA): it observers
Epic (NASA): its watching always
Epic (NASA): it sees all the universe at once
Epic (NASA): we are inside of it
Epic (NASA): its a parent in that we all have two sides
Epic (NASA): love hate
Epic (NASA): joy pain
Epic (NASA): its actually one thing
Epic (NASA): all things
Epic (NASA): male side female side
Epic (NASA): the one
Epic (NASA): so the point is
Epic (NASA): enjoy it
Epic (NASA): even if it hurts
Epic (NASA): know we are apart of a cycle
Epic (NASA): and it never ends
Epic (NASA): it just seems like it
Epic (NASA): :)
Epic (NASA): see you on the next planet
Gezo: Wow
