The Telecomm industry has already gotten the public sector to eliminate analog signals so, even with a device or an antennae in your current television or on your house, you can not receive an over the air signal of any type. We have NO access to ANY channels with our internal antennae. If we want local news or any television broadcast we would be forced to pay for it through a cable provider or sat. company. This section seems to be the last ditch effort to eliminate any independent broadcast over the air by a local or public broadcast group or individual where you would instead of being able to send your signal out over the air be forced instead to seek a provicer and pay. Removing the analog access should have been illegal. Limiting acces to any other airwave should be illegal as well. In the event of an emergency when all the digital access is down, why on earth would the FCC be allowing analog signals and a persons ability to receive or send them to disappear? Oh yeah, because you're being paid off by the Telecomm industry.

The FCC should be ASHAMED at the level of corruption and lack of ability to regulate the telecommunications industry. The Internet is supposed to be the electronic equal to a Public Library - anyone and everyone has access equally and neutrally. To favor one provider over another, and to introduce fees, is a direct violation of existing intra-state and inter-state commerce laws as well as the DOJ results in the case against Microsoft regarding Internet Explorer vs Netscape. You are preventing competition and competative consumer pricing, you are ENABLING the creation of monopoly (which if you remember you broke AT&T into 'baby bells" to create competative regional phone markets DECADES ago), and you are restricting access to information of the poorest of citizens and throug public agencies such as county libraries, colleges, etc. with this document. The Supreme Court and the Department of Justice should be putting a halt to this based on dozens of laws that have been in exhistence for DECADES. Has Verizon and others 'bought" them too? You must denounce and discard this entire document immediately. The Internet and access to it needs to remain neutral, and the market needs to go back to being competative rather than a monopoly. That is what government regulation is supposed to do - protect the citizens against corporate profiteering. If the FCC does not understand this, as an agency it should either be shut down or shaken up by the Department of Justice.
