I seriously doubt there is any point in submitting this comment as the head of the FCC is a lobbyist bent on corrupting our already corrupted internet, but for what it is worth, are you seriously buying the argument that because there is no competition among our ISPs that going from three to two wont affect it? The problem is is that as a regulator, you dont ensure healthy competition and now we have the slowest and most expensive internet in the developed world. This is a direct result of the antics of Comcast and your boss, who has deeply damaged the health of our democracy. Please do not allow this merger. It obviously creates monopoly power. It concentrates the power in the single worst company (from an employee, customer, and service perspective) that exists. It is embarrassing enough that the company who invented the internet now lags so far behind. Please protect the people of this nation and ensure a healthy functioning capitalist democracy from promoting competition, not limiting it. Thanks.
