One of the jobs of the FCC is to preserve information transfer in the American Spirit ? equality for all. Allowing the proposed changes to Net Neutrality by TWC and Comcast will stifle technological development, entrepreneurship and economic growth. These companies have proven that they cannot be trusted and take every opportunity to gouge their customers because they are the ?only game in town.? Rates consumers pay are ridiculous, compared to other countries. Data speeds are terrible.

Making changes to a free internet is not the answer. Restricting speeds and creating fast lanes and slow lanes undermines many of the core principals of opportunity that America needs to preserve to survive.
