This is a very important matter in regards to keeping students innovative and up to date with the rest of the world. Knowing we are, I believe, 17th in the world in terms of education is terrible. Now that textbooks are being phased out and dependance on tablets, laptops, etc. are increasing it seems this company, Globalstar, has a great solution. The free access points and helping alleviate congestion in Wi-Fi, which, according to all accounts is becoming overloaded, appears to be the right time for the commission grant approval for the TLPS. I don't know the exact percentage of people with Wi-Fi devices, but I know it must be substantial. This proposal by Globalstar covers more people and speeds things up which is desperately needed. Helping students achieve better learning spawns more innovation, which the FCC supports. The two are hand in hand and I believe this is a great opportunity. Plus with free service to people in disaster areas, that is pretty commendable. Thank you for taking the time.
