Maintain an open and neutral internet. An explanation that a two tier system would better serve the public is blatantly false. Providers such as Comcast and Time Warner have created monopolies around the country. Let me explain an example: here in Newport Beach, CA, we have two providers, TW and Cox. They serve their customers on opposite sides of the Bay. Once, I contacted Cox asking for service on the TW side. I was told that unless I could provide them a list of 50%+ of residents, they would not be able to supply service. What???

With such supporters of Net Neutrality as Google and Facebook, perhaps it is time to step back and reconsider the reason being given by the Providers that is contrary to everyone else.

Sincerely, DaveS
