By allowing Comcast and Time Warner Cable to merge the government is encouraging the birth of a legal monopoly. I do not believe this should be allowed because it will negatively effect the U.S. economy by limiting our country's economic diversity. Net neutrality needs to be preserved! The legal monopolies that cable and internet service providers such as Comcast and Verizon have over the industry is already detrimental to economic diversity in the United States. Ordinary citizens and start-up businesses can not afford the millions of dollars to effectively lobby on the behalf of consumers and budding entrepreneurs. Do your jobs and protect our right to an open and free internet.

By allowing internet service providers to divide the quality of internet speed based on money is legally allowing socio-economic discrimination. If this horrific bill is passed and businesses like Comcast and Verizon are allowed to put people and businesses into classes, it will open the door for even more opportunities for legalizing the severe economic disparities that are already present in the U.S.

Ask yourselves, who will this bill really help? Who stands to profit?
