Please deny RM 11708, as it proposes to further exacerbate the harmful interference now caused by other wider bandwidth activities in the cw portions of the spectrum allocated for the amateur radio service.

The FCC should maintain protection for all incumbent CW, RTTY and narrow band data mode users who would otherwise be overrun by interference from wideband data modes, including PACTOR 3 and PACTOR 4, if RM-11708 is adopted.

I urge the Commission to maintain the 300 baud limit and impose

a 500 Hz bandwidth restriction in all HF CW/Data subbands

while allowing RTTY/data to operate with up to 2.8 KHz bandwidth in the other (wideband) parts of the amateur HF bands.

Thank you for rejecting RM-11708.
