Dear Chairman Wheeler,

The internet should stay neutral and all content should be delivered the same way. For one thing, if this happens it will violate freedom of speech. Another reason is it will hurt smaller companies. I also think it will hurt people who can't afford faster internet. As chairman of the FCC, please create rules that keeps the Internet neutral. I don't want ISPs to be able to make money over Internet speeds.

Sincerely,
Samuel Campbell

Dear Chairman Wheeler,

The Internet should stay neutral. All content should be delivered the same way. For one thing anyone who can't pay or won't pay is left behind. Another reason is some websites might have more money than others so only big companies can be fast, like Twitter. I also think only the biggest companies will survive- the smaller websites won't make money so they can't pay their workers, and then people might lose jobs. As chairman of the FCC, please create rules that keeps the Internet neutral. I don't want ISPs to be able to make money over Internet speeds.

Sincerely,
Katie Halloran

Dear Commissioners,

A few issues I care greatly about:

1. Copper Telephone Service: I want CO powered, copper, twisted pair, POTS, all the way to my phone, that keeps working when the power goes out, so I can reliably call the Fire Department and not die. VOIP, cellular, or fiber is not a replacement, as it is overly complex (and often unintelligibly compressed, clipped, delayed, and vocoded). My parents and grandparents paid for a beautiful network of copper twisted pair, and you're allowing Verizon and AT&T to let it waterlog and rot in the ground, then force me to unregulated services I don't want.

2. Net Neutrality / ISP as Common Carrier: Internet service providers should do just that -- connect me to the internet, without regard to content, without filtering, without preference given to types or source of data.

3. Competition: I want a choice of carriers, so separate the physical (copper pair, coax cable, fiber) from content, and require open access by competitive providers to my home.

4. Robocalls: Identify the violators and work with the FTC to prosecute them hard. And I don't want politicians or so-called charities exempted. "Do Not Call" must mean no recorded or mass calls, period.

Sincerely,

Michael Pallack

Dear Chairman Wheeler,

The internet should become open. If a company wants to charge to be faster, that is their choice. For one thing, we have a right to create business laws because this is a democracy. Another reason is that companies should have a faster choice for internet and the option to buy it. I also think companies should be allowed to make money and create competition. I support an open Internet and your efforts to create one as chairman of the FCC. It is okay to create competition between companies, even if it means charging people for it.

Sincerely,
Shiel Logandan

Dear Chairman Wheeler,

The internet should become open. If a company wants to charge to be faster, that is their choice. I do not think that the people should have to pay for faster internet, because if not everyone pays then companies will not make money; and it will be unfair to them. It would be harder to advertise on the internet. So you should let them have to pay for it. It makes the most sense to do that, so please take the people and my suggestions into account.

Sincerely,

A.J.

Dear Sir:

I strongly support true net neutrality, in which Internet Service Providers are forbidden from setting up "high speed lanes" for favored clients, and from double-charging for bandwidth by charging both customers and content providers. The Internet is one of the most vital infrastructures in the nation, and without the protection that true net neutrality provides, it is in danger of being controlled by a small group of companies that will inevitably slow the kind of innovation that created the modern Internet economy in the first place.

Sincerely,

Andrew E. Love, Jr.

RE: Open Internet / Net Neutrality

Dear Commission Members:

The internet has evolved to become an integral part of everyday life. It has moved from academic experiment, to hobbyist, to consumer luxury, to the utilitarian utility it is today. It has moved from being as out of reach as the telephone and rural electricity once was to become as much of an information leveler as the telegraph and radio airwaves were. In its regulation net neutrality should be maintained. The internet is a utility and should be regulated as such.

Sincerely,

Gary A. Rhule

Dear Chairman Wheeler,

I personally think that internet should stay neutral. All content should be delivered the same way. For one thing, companies such as Netflix and Hulu are big and can afford to pay ahead of time, but smaller companies cannot. That means that people are willing to pay for fast internet and the big companies such as Time Warner Cable and Comcast will be paid the big money. I also think that other companies should have some success and a good name so I think that this should not be allowed. As chairman of the FCC, please create rules that keeps the Internet neutral. I don't want ISPs to be able to make money over Internet speeds.

Dear Chairman Wheeler,

Please keep the net neutral. I have several reasons why you should do this. For one thing, some websites have more money than others, so only big companies can pay to be fast, like Twitter. As a result of this, anyone who can't pay or won't pay for the higher speed are left behind, which could have some negative effects like if were lost in the woods sent out a message for help because of open Internet they may not be heard on time. I also think peoples' voices will only be heard if they can afford to pay to be in the fast lane. Which would also have some negative effects like if someone wants to start a March, but he can't because he isn't spread the message around because of open Internet. This is why I disagree; I hope this letter makes you think about it that way, too.

Sincerely,
Milo Penning

June 2, 2014

Dear Chairman Wheeler,

The internet should stay neutral. All content should be delivered the same way. For one thing, let's say when you place an order on Amazon, they could pay to be fast- when you place an order on an independent lipstick website they cannot pay to be fast so then people would not buy from some independent lipstick website. The lipstick website would lose money and go out of business. That would not be good. Another reason is what if are watching a movie on you're computer and you are getting to that climactic scene and right before it the spinning beachball of death comes and you get mad! I also think that even big companies that have billions of dollars will not want to pay the extra fees to be faster. As chairman of the FCC, please create rules that keeps the Internet neutral. I don't want ISPs to be able to make money over Internet speeds.
