You know why we need net neutrality? Because we are already being price gouged by cable companies and ISPs. Now if we lose net neutrality, our prices will go up on everything internet based, from amazon to Netflix, which Comcast already forced into paying more to have their content carried. All these big isps like Verizon and AT&T are lobbying for is for growth to be stifled for the little guy while their record breaking profits keep breaking records. This is in principle the same cases of bill mcgowens vs. MaBell.
