As a disabled veteran net neutrality is extremely important to me. I schedule a lot of my appointments online and discuss results of tests with my doctor online as well. I am not a rich man, I make just a little above minimum wage, asking those like me to pay more for what should be free would ultimately be detrimental to me and those like me. We would see our access to basic services crippled beyond belief while those who have deep pockets would bulldoze us into the ground. Please, do not implement this poisonous plan to end net neutrality.
