

7521373897.txt

My name is Timothy Trout, I own and operate a small WISP in central California and provide internet to rural clients. Most of my customers are served from mountain top locations and I believe the commission's adoption of the new rules for 15.407 for the 5.725-5.850 ghz band will severely affect my business and my ability to deliver internet to the rural residents of California. I urge the commission to reconsider and keep emission standards to the old 15.247 standards.

Thank you,

Timothy Trout
