I have Satellite internet. I needed to purchase Microsoft Office the other day and found that it is now only being sold as an internet download. My only choice for the internet is either Satellite or dial-up. I'm finding that more and more capabilities that a lot of people take for granted, I cannot get. With the caps on my connection and the limited speed there are more and more things I cannot do. I had some medical test ran the other day that the hospital wants to deliver the results via email. I don't know if I will be able to get them or not. It took hours and many sessions to sign up for the affordable care act due to network time outs and lost connections. The industry and the Government is pushing more and more requirements to the internet while there is a large segment of the population that cannot participate. Rural America needs Broadband access at affordable rates now.
