

I Support Network Neutrality

I strongly support network neutrality and see it as being a crucial element in promoting a fair and open Internet that enables businesses, both small and large, to thrive. To this end, I urge the FCC to classify ISPs as Title II Common Carriers.

As a small website owner, I need a fair playing field in order to be able to compete. If a larger site can pay for faster access to customers than my site, no matter how innovative it is, will be at a distinct and ongoing disadvantage. Please make the right decision in the interest of the people to maintain network neutrality. Supporting network neutrality means that you'll be supporting your mission of promoting innovation and improving our national economy by ensuring a competitive framework for broadband investment and infrastructure.

Thank you,  
Tyler Fogarty
