1. Should there be an outright ban on fast lanes?

YES. What is the difference between a fast lane and slow lane? The term fast is relative, so by creating a fast lane, you're also simultaneously creating a slow lane. Calling it a fast lane is an obvious attempt at pretending this law change would still qualify as net neutrality, but it won't. So, YES, there should be an OUTRIGHT BAN ON FAST LANES.

2. Should broadband access be classified as a Title II common carrier?

YES. Internet access is a utility and it should be classified as such.

3. Should the new Open Internet provisions also cover wireless (mobile) broadband?

YES. Whether data access is via a traditional ISP or through a wireless carrier, it is about access to the same thing - the internet. Per #2, the internet is a utility, and should be regulated as such.

The FCC should start doing the things it claims it will do - REGULATE THE ISP INDUSTRY.

1. BAN ANY SORT OF DATA DISCRIMINATION (fast lanes, slow lanes, whatever you want to call it).

2. REGULATE IT LIKE A UTILITY - THEY ARE COMMON CARRIERS.

3. RECOGNIZE THAT WIRELESS ACCESS IS NO DIFFERENT THAN WIRED ACCESS

Do the right thing for the PUBLIC!!!
