Dear FCC,

My name is Anbo Wei and I live in Needham, MA.

Net neutrality, the principle that Internet service providers (ISPs) treat all data that travels over their networks equally, is important to me because without it ISPs could have too much power to determine my Internet experience by providing better access to some services but not others.

A pay-to-play Internet worries me because new, innovative services that can't afford expensive fees for better service will be less likely to succeed.

Today, we've already seen bandwidth slowed on major streaming websites like Netflix, but not on services like Xfinity. So long as an ISP conflict of interests exists, the internet will always be biased towards those ISPs have selected to favor. It doesn't matter how good a new website is if you can't get it. As the FCC, you know this. It would be absurd to think you didn't. So the question you need to ask yourself is who it is you're trying to protect; the ISPs or the end users.

Sincerely,

Anbo Wei
