Dear FCC,

My name is Ryan and I live in Orlando, FL.

Net neutrality, the principle that Internet service providers (ISPs) treat all data that travels over their networks equally, is important to me because without it ISPs could have too much power to determine my Internet experience by providing better access to some services but not others.

A pay-to-play Internet worries me because ISPs could act as the gatekeepers to their subscribers.

The Internet is important to me because, as a student, I need to know that there will not be barriers to any research that I may have to perform, as well as any new products I may try to invent and release in the future. If ISP subscribers have an easier time loading websites of existing companies than my new innovative product, there's no way that I will be able to compete or succeed. And this goes the same for anyone in the future who tries to create a product, thus monopolizing the Internet to a few big companies, a concept that I am sure you are very insistent on stopping from happening.

Sincerely,

Ryan
