A free and open internet is important not only for the people, but also for the economy. Businesses, non-profits, and organizations alike will all suffer if this is written into law. People won't be able to connect the way they can now, and information will be limited to all.

It was one of our founding fathers, Thomas Jefferson, who said the following: "I think by far the most important bill in our whole code is that for the diffusion of knowledge among the people. No other sure foundation can be devised, for the preservation of freedom and happiness...." How are people supposed get gain access to the wealth of knowledge available in today's world without open internet?!

The fact that this is even being considered is outrageous. I would urge those with the power to turn down this bill to do so, else the entire world suffer at the consequences.
