

I received my amateur radio license in 1991, and have enjoyed using CW as one of my primary modes ever since. Not only enjoyable, the CW mode is well known as the mode that can “get the message through” when other modes fail, a characteristic that can prove vital in times of emergency.

It is my understanding that significant interference to CW operations could result from wideband signals on the CW/Data sub-bands if RM-11708 were approved. Please preserve the integrity and utility of our existing CW sub-bands. Please reject RM-11708.

Respectfully,

David A. Houde, W4DUK
