I am contacting regarding the licensing for using our Radio equipment in U.S. The equipment operates at the frequency range between 10MHz-1GHz with the power less than 0.25W(1mW-10mW), it is battery powered. It is a ground penetrating radar in which the antennas will be directed to the ground for surveying. If we need FCC certification can you please let me know which is the appropriate one and send me the application procedure to obtain the certification.
