I would like to express my support for establishing three new EAS event codes: Extreme Wind Warning (EWW), Storm Surge Watch (SSA), Storm Surge Warning (SSW). Currently, the EWW uses the TOR event code, which causes confusion among our users/customers. The new code will allow the NWS to improve public alerting of destructive, life threatening winds, which will save lives. For storm surge: The biggest potential loss of from tropical cyclones is from storm surge. Therefore, it is equally critical to get EAS codes for the new Storm Surge Watch/Warning products as quickly as possible.
