August 1, 2014

Before the
FEDERAL COMMUNICATIONS COMMISSION
Washington, D.C. 20554

In the matter of

(Docket No. MB RM-11727)

COMMENTS IN SUPPORT OF FORMAL RULEMAKING

Turbo Technical Services (“TTS”) submits this comment in support of RM-11727 and encourages the Commission to move expeditiously to issue a Notice of Proposed Rulemaking on the matter. TTS engages in Engineering Consulting for a variety of stations, the majority of which are smaller non-rated communities which rely upon maximum coverage from their facilities to maintain financial viability.

While the exact impact of this proposal to stations may be uncertain at this point, it is clear from our research that there will be technical benefit to a number of facilities. TTS fully supports any Commission proceeding which can bring relief to the smaller market stations it serves, and several of our clients would be eligible to utilize the new Class-C4 definitions.

We look forward to seeing this process move toward an NPRM for the benefit of many stations working very hard to serve their community and outlying areas.

Respectfully Submitted,
