COMMENTS OF THE TOWN OF LEVERETT MUNICIPAL LIGHT PLANT

I. INTRODUCTION

The Town of Leverett Municipal Light Plant ("LMLP") is a municipally owned agency to provide high-speed broadband Internet access to residents. LMLP submits these comments in full support of the dual Petitions of the City of Wilson, North Carolina ("Wilson") and the Electric Power Board of Chattanooga, Tennessee ("EPB") (collectively "Petitioners") filed on July 24, 2014, and released for public comment on July 28, 2014, in the above-captioned proceedings.

II. STATEMENT OF SUPPORT

The LMLP strongly supports and encourages the Commission to preempt state laws to the extent requested in the respective Petitions, on the grounds that they create artificial barriers to broadband infrastructure investment, deployment, competition and innovation, by severely restricting and unreasonably delaying the options available to local communities to obtain 21st Century broadband infrastructure and services for businesses and residents.

A. State Broadband Laws like those in North Carolina and Tennessee Create Artificial Barriers to Broadband Infrastructure Investment, Deployment, Competition and Innovation

The Wilson and the EPB Petitions are examples of state-imposed barriers to broadband infrastructure investment and deployment that have the purpose and effect of preventing municipalities around the country from providing exactly the kind of high-capacity network and services that America needs to remain competitive in the emerging knowledge-based global economy. As the Petitions note, these broadband networks provide countless benefits to their

communities – including enhanced economic development and competitiveness, educational opportunity, public safety, homeland security, energy efficiency, environmental protection and sustainability, affordable modern health care, quality government services, and the many other advantages that contribute to a high quality of life.

The LMLP has seen economic benefits starting from network construction. Real estate and rental values, which had been depressed by lack of high-speed Internet access, are reflecting increased market interest due to the broadband project. Families with school children or with elders are especially noting the enhanced value and quality of life provided by high-speed access to educational and medical institutions and services.

B. Congress Provided the FCC the Authority to Preempt

As the Petitioners state, Congress foresaw as far back as 1994 that access to advanced telecommunications capabilities would become critically important to all Americans in the years ahead. Through Section 706(a) of the Telecommunications Act of 1996, Congress gave the Commission broad authority and discretion to determine when, where, and how to ensure that “all Americans would have such access...on a reasonable and timely basis.” In Section 706(b), Congress required the Commission to take affirmative action to acquire information about the pace of deployment of advanced telecommunications capabilities, to decide whether such deployment was occurring on a reasonable and timely basis, and, if the Commission ever answered that question in the negative, to act immediately to remove barriers to infrastructure investment and to promote competition. The Petitioners note that, in charging the Commission with this responsibility, Congress was well aware of the significant contributions that municipalities could make and undoubtedly understood that it would be impossible to make the benefits of broadband connectivity available to all Americans without the participation of municipalities, particularly in areas in which the private sector found investment unremunerative.

C. Local Communities Must Be Able To Make Their Own 21st Century Broadband Infrastructure Deployment Choices

In today’s global, knowledge-based economy, all local communities -- rural, tribal, and urban -- recognize that access to modern broadband Internet infrastructure is essential to enable economic and democratic activity. Modern broadband Internet infrastructure is the lifeblood of our 21st century global knowledge economy. Likewise, local communities are the lifeblood of America. Towns, counties, and cities are where economic activity and civic engagement happen. Local elected officials live among their local constituents, are on the pulse of local needs, local

resources, and local tolerance for risk, and are easily held accountable for their decisions, whether in the local grocery store, church, soccer field, or voting booth. Local communities are best positioned to determine the best options for their citizens, businesses and institutions, whether this means working with willing incumbents, entering into public-private partnerships, developing their own networks, or being served by other local communities who have the capacity to provide Gigabit services.

As the Wilson Petition succinctly states:

“[A]t the end of the day, local governments, accountable to local citizens, understand their own needs and should have the freedom to find local solutions to local problems. We should not require citizens to beg big corporations to deploy systems when these citizens have the power to take matters into their own hands. Section 160A-340 thoroughly undermines these principles.”

III. CONCLUSION

The Town of Leverett Municipal Light Plant fully supports the Commission’s removal of artificial state barriers to broadband infrastructure investment, deployment, competition, and innovation. Ultimately, it is about preserving local choice. At this critical time in our country’s history, when the rest of the world is rapidly deploying this essential 21st century infrastructure, *all options* must be on the table for our country to remain globally competitive. Removing the barriers to broadband investment and competition, as requested in the Petitions, will enable more communities to be self-reliant, and better enable America to maximize *all resources* so that no one is left behind, unable to participate in this knowledge-based global economy.
