rfd tv is watched by my family in both our homes in florida and north carolina with valuable information not found anywhere else. we rate it right up there with pbs with useful content relative to our life experiences. for many years there was a void that has been filled with rfd tv programing. i find it quite concerning that a few can dictate to the many what programing is available. if the cable companies don't want to make everything available in their packages, please pass legislation were the customer will only pay for the programs they want to watch. then we would have true economic freedom in america based on supply and demand. in advance thank for your help in this matter.
