**Use the power of Amplex for crystal clear phone service!**

## VoIP Details

**All that you need:**

- ATA (Analog Telephone Adapter) - this box allows you to use your existing phones. It converts the analog voice signals into digital data signals.
- Customer supplied analog phone. No need to purchase costly new equipment.

Residential VoIP can be used to offer a variety of innovative services to our customers. It includes support for all of the features commonly found on a traditional telephone line.

**It's simple:**

Amplex provides you with the hardware to use your existing phones. This can be a standalone box or combination ATA/wireless router. Your phone plugs into the ATA or you may connect the ATA to your wall jack, thus back-feeding the signal to every phone jack throughout your house.

Utilize the power and reliability of your Amplex service to free yourself from costly landlines that include hidden charges and extra fees.
