

Requests/Suggestions

- Post clear EIRP/TPO guidelines in tabular format, shouldn't need a lawyer and RF engineer to know how to read Part 15, legally set equipment
- Need more spectrum, lightly licensed to keep out consumers, easily worth the trouble/cost for WISP operators
- Would love DFS approval for NanoBeams 😊
- Need more power in DFS frequencies – lower power means more towers, every tower means finding more sites, negotiating more lease agreements, paying more money per month for tower leases. 40 dBm would be awesome, 50+ (PtP limit for UNI-III (?)) would be awesome for PtMP.
- Complete guide for starting WISP operators would be huge for expanding access, as would startup grants
