

To whom it may concern:

(About 706 worlds)

As you go about your daily task and your decision-making with RFD TV, keep in mind what really is happening behind the scene, take the time to look deep into what is really going on.

With the multi-billion-dollar multinational corporation, do they really have concern for the individuals?

The chemical company Monsanto is a glaring example of disasters on this planet with their genetic engineering, causing all kinds of health problems to every kind of life form.

In the beginning part of the last century here is a striking contrast, someone by the name of ?Sir Albert Howard? a British botanist who studied the health of the soil, affecting the plants, which other kind of life forms consume. Once he got the health of the soil buildup, the things that grow out of the ground became healthy, which went on in his experiment to cattle, which help then to become healthy. Unlike the monoculture that is going on now, with all kinds of garbage that is being put into the feed for the animals to eat, as well as being injected with, which the human consume ?which I do not. I got extremely sick meeting spareribs November 79 that was enough. Weather walks, swims, flies, crawl, or slither like a snake. I don?t eat it, and I don?t miss it!!! >>> And outside of a few injuries. I haven?t had the need of a doctor for about 45 years.

Consider Why Monsanto and others trying to put laws into effect that dairy cattle?s have to be injected with their trash, WHICH WILL MAKE YOU SICK, and your very own offspring, sick. They refused to work with nature, they do everything they can to work against it, how else do you think the >>MAD HUMAN DISEASE<< got into the cows!!

And what is her goal to refuse to let others enjoy the farm programs and learn how to grow things for themselves.

The ultimate goal by a very few like the Rothschild?s Rockefellers etc. is to reduce the population by some 5 billion claiming the planet is overcrowded and all kinds of shortages which, they and others have engineered.

This planet has been designed not by humans to take care of and sustain all of its life form like greedy companies like greedy companies like Monsanto and many others, will in a very short time reap the harvest of what they have done.

There are many chemicals deliberately put in the food to cause health problems. (\*\*\*)

!!>>>The fluoride will cause cancer<<<!! IF they tell you ?no? ==> they ARE TELLING YOU A LIE!

Polysorbate 60 and Polysorbate 80, a type of sterling that affects some people so they cannot get pregnant.

(\*\*\*)>>> That is not to say the ones making the food, know the truth about the chemicals they are using.

In the little creamer they have: sodium citrate and disodium phosphate >>> so you have a choice between supplicant span and top job for they have the same chemicals in them to.

Do not forget Ted Turner?s comment calling the humans useless eaters, and Prof. Eric Pianza Texas University extolling the use of Ebola, because of how quick it kills.

Such a lovely group of human deciding ?What You Shall Eat? ? ?What You Shall Be Injected With? ? ?Where YOU Shall Live?, >>AND how many can be on the planet,<< . . . Who are they to even open their mouth, and where were they when this planet was being formed, they were nowhere to be found.

PS:

Give careful thought to what is written, what I have written is to encourage good health for every kind of life form.

Sir Albert Howard:

After he built the health of the land up, starting with cows, then humans, their health problems left. AND he was Cows touching noses with the cows on the farm next to his, even those cows had Hoof and Mouth diseases, because Sir Albert Howard built up the health of the land on the farm, his Cows did not get sic.

!!!>You have the need to grow your own "feed / food"< and there must be a way to learn!
