As a retired Army Officer and current mathematics teacher, RFD TV provides a critical link of our western heritage for our young men and women; particularly, as our nation changes and students must understand where key concepts and values come from.

It is not a bumper-sticker slogan to say our children do not understand our past, present, and future. Over 60% of the students I teach (not to mention the Soldiers I commanded over 27 years) actually believe food comes from a factory, the super market or post commissary. I have used RFD-TV to open their eyes to understand the details and calculations in agriculture, economy, land use, veterinary, and basic heritage.

They need RFD-TV. In fact, this type of programming should be tripled. V/R,
Chuck Duray, Lt Colonel, USA-Retired
