Pertaining to VRS Interoperability. I just tested with a friend all video phones from different providers, CAAG, ZVRS, Sorenson, Purple. but none of those VP's can leave messages on my friends Sorenson Phone, only if my friend calls with sorenson VP can we leave a message on a sorenson VP, this is wrong and Sorenson should play well with other providers to enable video mail to be left on their machines.

This is similar to verizon blocking all voice mails from any phones except verizon, but yet having the ability to leave a message on every other provider (sprint, Tmobile, etc) This is not right that a company with the largest market share determines how systems are setup.
