

Dear FCC,

My name is Ramille Bagui o and I live in Covina, CA.

Net neutrality, the principle that Internet service providers (ISPs) treat all data that travels over their networks equally, is important to me because without it ISPs could have too much power to determine my Internet experience by providing better access to some services but not others.

A pay-to-play Internet worries me because ISPs could act as the gatekeepers to their subscribers.

Dear FCC,

The idea that internet providers will have the power to unfairly regulate loading times for those willing to pay for it will eschew better service towards wealthier, corporate businesses that are willing to "play ball." This will leave newer companies and smaller businesses, such as start-ups, who wish to compete online, but are unable to pay for the "fast lane," at a severe disadvantage.

If Net Neutrality ends, the future of the internet and the current online free-market would be at jeopardy. If the ISPs receive the go-ahead to end net neutrality small businesses who rely on online sales will suffer, and large businesses will continue to flourish due to their faster services and dominate digital real-estate. This leads to a less diverse internet experience and, ultimately, less innovation.

The internet should be treated as a communication service providing equal access across all websites/online services available, and ISP's should not have the power to determine loading rates.

Sincerely,

Ramille Bagui o
