Dear FCC,

My name is S Hillgrove and I live in Norwalk, CT.

Net neutrality, the principle that Internet service providers (ISPs) treat all data that travels over their networks equally, is important to me because without it users may have fewer options and a less diverse Internet.

A pay-to-play Internet worries me because ISPs could act as the gatekeepers to their subscribers.

A diverse Internet is important to allow equal opportunities for businesses. I work for a firm that delivers some services online. If ISPs are able to set "tolls" for faster service, this will increase the cost of doing business for my firm in order to maintain service levels. Reducing margins on existing, healthy businesses doesn't help the economy - only the ISPs benefit. From a personal perspective, the US already lags behind much of the rest of the world in terms of quality of Internet service/speed. Why would we want to add more barriers?

Sincerely,

S Hillgrove
